Networks: Structure & Economics

Administrivia

- 1) QUIZ TODAY
- 2) Rankmaniac is ending tomorrow!
- 3) Rankmaniac reports due monday
...really, it's best to finish them as you do the project!
- 4) HW5 out on today (due in 2 weeks)
...short and easy. Get it done before pandemaniac!
- 5) Pandemaniac out next week
...much less “overhead” than rankmaniac
- 6) Don't forget to think about your project ideas!

Today

Communities & Clusters:

Can you hear the shape of a network?

We've danced around clustering the whole term

...it's one of our universal properties

...it lets you optimize pagerank computations

...it's crucial for information cascades

...it's been in lots of your blog posts

But, we still haven't given a satisfying definition
of a "cluster" !

Political blogs

My “ego” network on FB

Company org hierarchy

Academic collaborations

What defines a “good” clustering, a.k.a.
partitioning of a network?

Can you hear the shape of a drum?

(Do the eigenvalues of the Laplacian uniquely determine the shape?)

Frequencies of vibration \rightarrow eigenvalues of the Laplacian!

Can you hear the shape of a drum?

(Do the eigenvalues of the Laplacian uniquely determine the shape?)

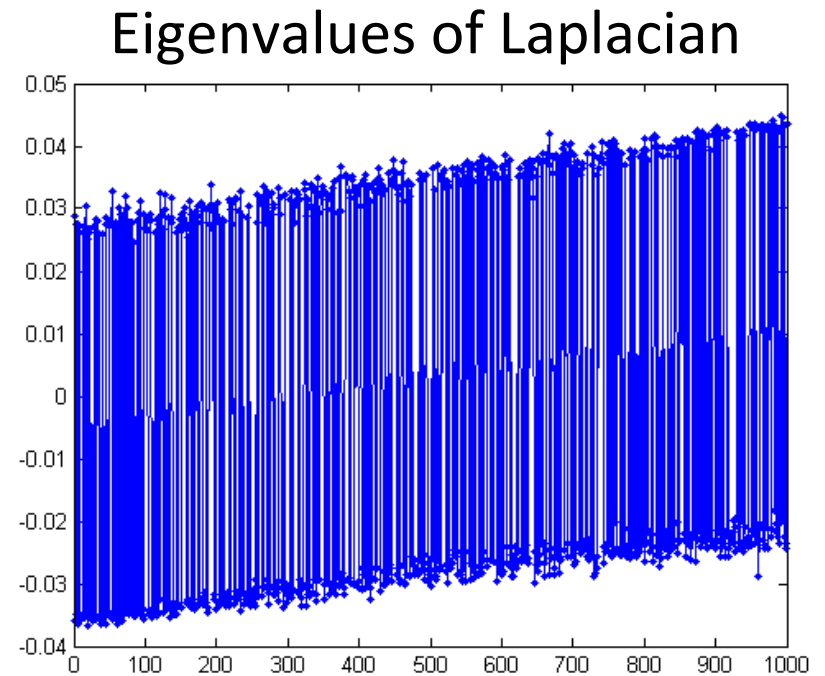

No! →

Example:

Adjacency matrix

Example:

Adjacency matrix

Sorted eigenvector

Example:

Sorted adjacency matrix

Sorted eigenvector

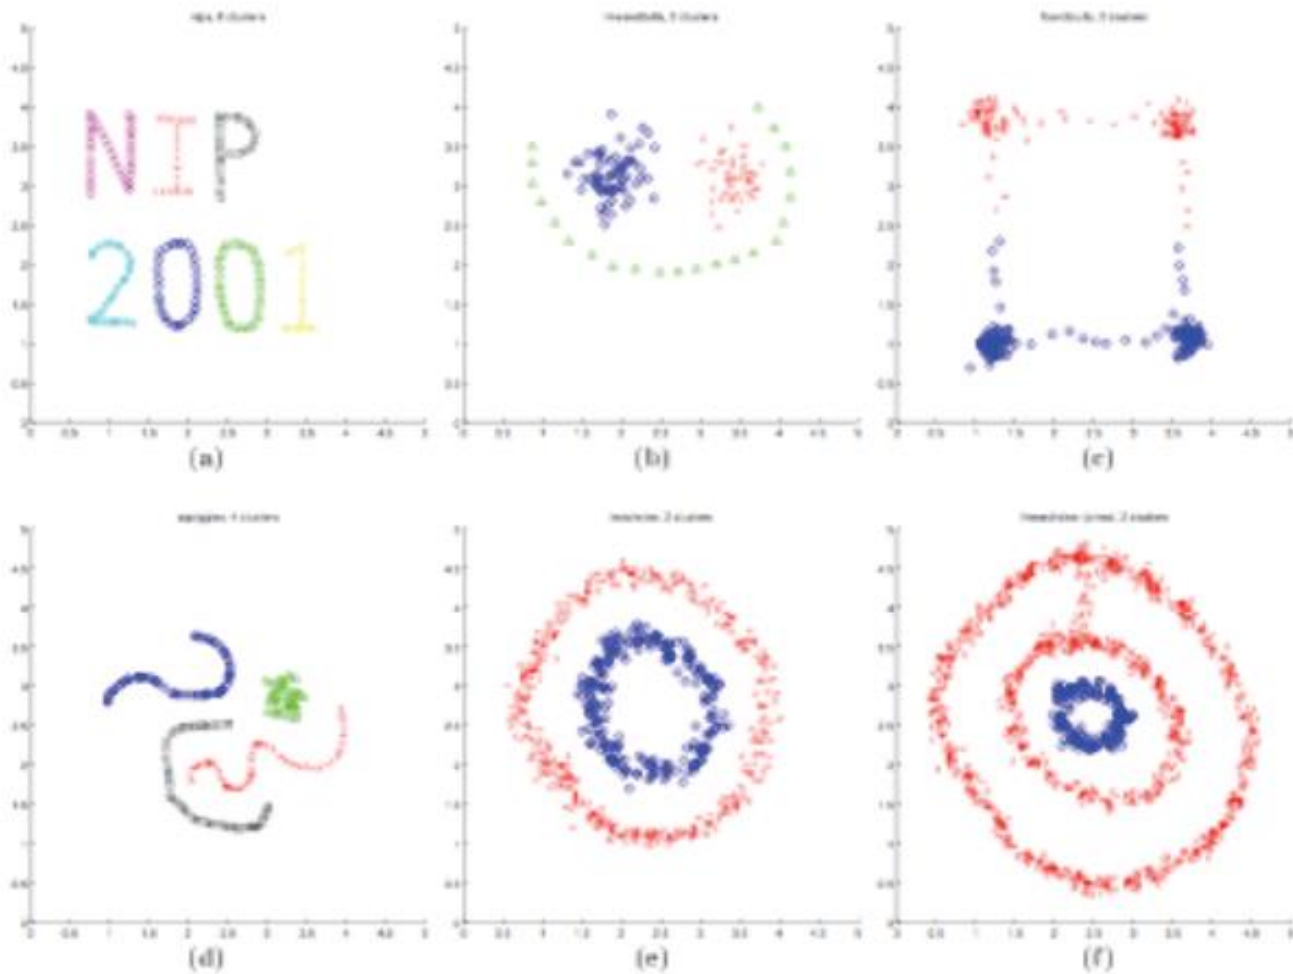

This applies beyond graphs

This applies beyond graphs

Examples (Ng et al. 2001):

Examples (Ng et al. 2001): k-means vs. spectral
